

BHARATH GOPALSAMY

Full-Stack Developer | React · TypeScript · Node.js · Django · MERN

+1 902-338-0222 | bharathgopalswamy09@gmail.com | [linkedin.com/in/bharathgopalsamy](https://www.linkedin.com/in/bharathgopalsamy) | github.com/bharathgopalswamy | bharathgopalsamy.vercel.app

SUMMARY

Full-Stack Developer with experience building React/TypeScript frontends, Node.js REST APIs, and deployed MERN applications. Skilled in authentication, testing, responsive UI development, and API integration with hands-on experience delivering scalable full-stack projects in Agile environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React.js, Vite, React Router, Context API, Custom Hooks, Tailwind CSS, Recharts, Jest, React Testing Library

Backend: Node.js, Express.js, Django, Django ORM, Django CBVs, REST API Design, Middleware, Gemini AI API

Databases: MongoDB Atlas, Mongoose, MySQL, Indexed Queries, Schema Design

Auth & Security: JWT, bcrypt, OAuth2, Session Auth, Role-Based Access Control, Protected Routes

Tools: Git, GitHub, Postman, Chrome DevTools, Figma, Vercel, Render, Agile/Scrum

EXPERIENCE

St. Francis Xavier University Students' Union

Antigonish, NS, Canada

Website Coordinator

Aug 2025 – Present

- Maintained a university website serving **5,000+ active students**; applied browser caching, image compression, and lazy loading to cut average page load time by **~20%** and resolve cross-browser rendering bugs across Chrome, Firefox, and Safari.
- Diagnosed and resolved **12+ navigation, broken-link, and layout bugs** via Chrome DevTools DOM and CSS audits, measurably improving site reliability and content accuracy.
- Established a structured content publishing workflow across 3 internal departments, reducing update turnaround from multi-day delays to **same-day delivery**.

Tech: Squarespace, HTML, CSS, JavaScript, Chrome DevTools

FirstLanguage Technologies

Chennai, India

Front-End Developer Intern

Aug 2023 – Jul 2024

- Engineered **8+ reusable TypeScript React components** with custom hooks and Context API; eliminated prop drilling across 4 feature areas and reduced unnecessary re-renders by **~30%** via memoization and React.lazy() code splitting.
- Integrated **5+ REST API endpoints** powering NLP analytics dashboards; applied request debouncing and client-side caching to reduce redundant network calls and improve UI responsiveness by **~15%**.
- Delivered features across 2-week Agile sprints through daily standups, PR reviews, and Figma handoffs, maintaining production stability across all sprint cycles.
- Debugged frontend state synchronization issues across analytics dashboard components by refactoring shared Context API logic and extracting reusable custom hooks, improving data consistency and reducing duplicate API requests.

Tech: React.js, TypeScript, JavaScript, REST APIs, Tailwind CSS, Git, Postman

Across the Globe

Bangalore, India

React Developer Intern

May 2023 – Nov 2023

- Built a **library of 15+ reusable React components** (data tables, modals, forms) following component-driven architecture, reducing duplicated UI code by **~40%** and accelerating frontend feature delivery.
- Profiled and resolved rendering bottlenecks in **6 components** using React DevTools Profiler, cutting average render time by **~20%** across 3 deployment environments.
- Delivered **5 features end-to-end** from Figma wireframes to production React code, coordinating API contracts with the backend team to ensure consistent data flow.

Tech: React.js, JavaScript, CSS, Git, Figma

PROJECTS

DermaCure AI — AI-Powered Skin Screening & Dermatologist Booking Platform | Live: derma-ai-psi.vercel.app | GitHub:

github.com/bharathgopalswamy/DermaAI

React.js · Node.js · Express.js · MongoDB Atlas · TensorFlow.js · JWT · Multer · Tailwind CSS · Jest · RTL · Vercel · Render

- Designed and built a **full-stack MERN healthcare platform** with React/Vite frontend and Express.js REST API; implemented 9 client-facing pages (dashboard, scan, results, booking, appointments) with React Router and reusable component architecture.
- Integrated a TensorFlow.js model for browser-side skin condition analysis across 5+ conditions; optimized model warm-up and image preprocessing to achieve **sub-2-second analysis** per upload with Multer-powered image handling.
- Implemented **JWT authentication** with role-separated access (patient / doctor / admin); secured all API routes with middleware-level authorization guards and bcrypt-hashed credentials in MongoDB Atlas.
- Wrote **unit and integration tests** with Jest and React Testing Library; mocked API calls with jest.fn(), validated async UI flows with waitFor(), and tested auth-protected route redirects across 6 test suites.

HabitIQ — AI-Powered Habit Tracking SaaS Platform | Live: [habitiq.vercel.app](#) | GitHub: [github.com/bharathgopalswamy/smart-ai-habit-tracker](#)

React.js · TypeScript · Node.js · Express.js · MongoDB Atlas · Gemini AI API · JWT · Recharts · Tailwind CSS · Jest · Vercel · Render

- Designed and built a **full-stack MERN SaaS platform** in TypeScript; implemented Context API for global habit and auth state, enabling real-time UI updates across all dashboard views without prop drilling.
- Integrated **Gemini AI API** for personalized routine generation using structured prompt engineering; built a full backend pipeline (controller → Gemini prompt → parsed response → MongoDB Atlas persistence) allowing users to save AI-generated plans.
- Engineered an **analytics dashboard** using Recharts with pie, line, and heatmap charts driven by a server-side aggregation logic, completion rates, focus scores, and consistency insights from habit data.
- Tested habit creation, streak logic, and **Gemini AI mock responses** using Jest and RTL; secured all routes with JWT middleware and resolved production CORS and async bugs through systematic API debugging.

MedCare — Healthcare Appointment Management System | GitHub: [github.com/bharathgopalswamy/DoctorPatient](#)

Django · JavaScript · MySQL · Google Calendar API · OAuth2 · Session Auth

- Built a full-stack appointment platform with **Django CBVs and ORM**; designed a normalized MySQL schema across 3 entities (patients, doctors, appointments) with indexed query fields to optimize lookup performance.
- Integrated **Google Calendar API via OAuth2** to auto-sync appointment events on patient and doctor calendars, eliminating manual scheduling and reducing admin effort by **~30%**; secured endpoints with Django permission decorators.
- Implemented slot **conflict detection logic** to prevent double-bookings and added server-side form validation across all patient-facing and admin flows to maintain data integrity.

EDUCATION

Saint Francis Xavier University

M. Applied Computer Science

Relevant Coursework: Data Structures & Algorithms, Big Data, Machine Learning, Computer & Network Security, Embedded Systems

Graduate Average: 82% (Approx. 3.7/4.0 GPA Equivalent)

SRM Valliammai Engineering College, Anna University

B.E. Computer Science

CGPA: 9.07/10

Antigonish, NS, Canada

Sept 2024 – May 2026

Chennai, India

Aug 2020 – May 2024

CERTIFICATIONS

- **Meta Front-End Developer Professional Certificate** — Coursera (2026)
- **Meta Programming with Javascript Professional Certificate** — Coursera(2026)
- Python for Data Science & AI Development — IBM (2023)
- React.js Essential Training, REST APIs — LinkedIn Learning (2023)
