Summary

Software Developer with experience building and optimizing web applications using React, TypeScript, REST APIs, and Django/Node.js. Strong focus on accessible, responsive UI, performance optimization, and reliable client-server integration. Hands-on grocery eCommerce operations experience (online order fulfillment workflows) and project background in data-driven systems and machine learning pipelines.

Education

Master of Applied Computer Science

2024–2026, Saint Francis Xavier University, Nova Scotia

Bachelor of Engineering in Computer Science

2020–2024, Anna University, Chennai

Technical Skills

Languages: Python, TypeScript/JavaScript, Java, SQL

Web: React, HTML/CSS, REST APIs, accessibility (WCAG), responsive design

Back End: Django, Node.js, authentication/authorization

Data: Pandas, scikit-learn, LightGBM, model evaluation (accuracy/AUROC)

Tools: Git, Postman, VS Code

Professional Experience

Website Coordinator

Aug 2025 – Present

ST. FRANCIS XAVIER UNIVERSITY STUDENTS' UNION

Antigonish, NS

- Maintain and continuously improve a high-traffic website, ensuring WCAG accessibility compliance, responsive behavior across devices, and cross-browser compatibility.
- Restructured navigation and content hierarchy to improve discoverability of key services and resources, reducing user friction and improving information access.
- Diagnosed and resolved broken links and performance issues (media delivery, page load bottlenecks) using compression, caching, and optimized asset delivery.
- Coordinated releases with stakeholders; validated changes and ensured accurate, timely updates for announcements and online services.

Front-End Developer

Aug 2023 – Jul 2024

FIRST LANGUAGE TECHNOLOGIES

Chennai, India

- Built reusable React components and UI patterns to support scalable, maintainable front-end architecture across multiple modules.
- Integrated RESTful APIs for real-time document retrieval and client-server synchronization; implemented resilient loading, retry, and error-handling states.
- Optimized rendering performance by reducing re-renders, improving state management, and refining asynchronous data flows for frequently updating content.
- Collaborated in Agile workflows to deliver features with reliable deployments, consistent UI quality, and accessibility considerations.

React Developer

May 2023 – Nov 2023

ACROSS THE GLOBE

Bangalore, India

- Developed modular React components supporting faster feature development and consistent UI behavior across the application.
- Identified rendering bottlenecks and improved responsiveness through targeted optimization of component lifecycle and state updates.

- Supported testing and deployment workflows to reduce regressions and speed up integration/debug cycles.

Additional Experience (Retail eCommerce)

PC Express Online Order Associate

Jan 2024 – Feb 2025

ATLANTIC SUPERSTORE

Antigonish, NS

- Fulfilled online grocery orders using the PC Express eCommerce workflow; ensured accurate picking, packing, and on-time pickup readiness.
- Managed substitutions and out-of-stock resolution while maintaining order quality and customer satisfaction.
- Coordinated with in-store teams to maintain order throughput during peak periods and improve reliability of pickup operations.

Projects

Patient Survival Prediction (ICU Mortality Classification)

GitHub

Tech Stack: Python, Pandas, scikit-learn, LightGBM

- Built a classification pipeline to predict in-hospital mortality (**hospital_death**) using clinical ICU data, structured experiments for repeatable model comparison.
- Cleaned data by removing identifier columns and handling missing values; performed encoding/normalization suitable for tabular ML models.
- Trained and evaluated models using stratified splits and cross-validation; achieved strong performance (reported up to **93.7%** accuracy) and tracked metrics including AUROC.
- Generated reproducible outputs including performance summaries, comparison reports, and analysis notes to support model selection decisions.

Malignant Lymphoma Image Classification (CLL vs FL vs MCL)

GitHub

Tech Stack: Python, ML workflows, image dataset preparation

- Developed an ML workflow to classify malignant lymphoma types from H&E-stained biopsy images across three classes: CLL, FL, and MCL.
- Prepared and organized a dataset of **5400+ images** collected across multiple sites with staining variation; structured data splits for reliable evaluation.
- Implemented preprocessing, evaluation, and reporting steps to enable repeatable experimentation and clear performance analysis for medical image classification.

MedCare Appointment Management System

Github

Tech Stack: Django, JavaScript, SQL

- Developed a full-stack scheduling platform supporting appointment availability and booking workflows with secure role-based authentication.
- Integrated Google Calendar API to automate scheduling and notifications; designed relational schema and validation logic to maintain data integrity.
- Implemented secure input validation, backend error handling, and robust user flows for reliable end-to-end scheduling operations.

FirstLanguage Landing Page

Live

- Converted Figma designs into accessible, responsive React UI using semantic HTML and modern CSS layout techniques.
- Optimized layout stability and asset loading to reduce layout shifts and improve perceived performance across devices and browsers.

Certifications

Python for Data Science & AI Development – IBM

Learning REST APIs – LinkedIn

SQL Essential Training – LinkedIn

Node.js Essential Training – LinkedIn

Git Essential Training – LinkedIn
